

2021 Healthcare Affordability State Policy Scorecard

Polling data repeatedly shows that healthcare affordability is the number one issue that state residents, on both sides of the political aisle, want their policymakers to work on. This scorecard identifies areas where Nevada is doing well and areas where it can improve. It reflects policies implemented as of Dec. 31, 2020.

STATE:

NEVADA

RANK:

38

out of 47 states + DC

TOTAL SCORE: 24.1 OUT OF 80 POSSIBLE POINTS

Nevada has much work to do to ensure wise health spending and affordability for its residents. According to SHADAC, 15% of NV adults could not get needed medical care due to cost as of 2019, and the share of people with other affordability burdens is far higher. While NV's high uninsurance rate (11.4%) may be a factor, healthcare is increasingly unaffordable largely due to high costs that affect everyone. According to the PCE, healthcare spending per person in NV grew 26% between 2013 and 2019, totaling \$5,844 in 2019.*

	POLICY SCORE	OUTCOME SCORE	RECOMMENDATIONS
CURB EXCESS PRICES IN THE SYSTEM 	0.0 OUT OF 10 POINTS As is common in many states, NV has done little to curb the rise of healthcare prices.	5.6 OUT OF 10 POINTS High private prices are one factor driving costs. NV's inpatient private payer prices are 180% of Medicare prices, placing them in the middle range of all states. Ranked 17 out of 48 states, plus DC.	Year-over-year increases in healthcare prices overwhelmingly drive state healthcare spending. NV should consider strong price transparency requirements and establishing a health spending oversight entity.
REDUCE LOW-VALUE CARE 	1.3 OUT OF 10 POINTS NV has not enacted meaningful patient safety reporting. 92% of hospitals have adopted antibiotic stewardship. NV has not yet measured the extent of low-value care being provided.	3.0 OUT OF 10 POINTS NV has more low-value care than the national average. Ranked 44 out of 50 states, plus DC.	NV should consider using claims and EHR data to identify unnecessary care and enacting a multi-stakeholder effort to reduce it.
EXTEND COVERAGE TO ALL RESIDENTS 	3.6 OUT OF 10 POINTS Medicaid coverage for childless adults extends to 138% of FPL. Only some immigrants can access state coverage options.	4.5 OUT OF 10 POINTS NV is among the states with the most uninsured people—11% of NV residents are uninsured. Ranked 44 out of 50 states, plus DC.	NV is developing a public option plan slated to start in 2026, and should consider other immediate options for residents earning too much to qualify for Medicaid, such as premium subsidies. The state should consider offering coverage options for legally residing immigrant pregnant people, and undocumented children, pregnant people and adults, as well as adding affordability criteria to rate review.
MAKE OUT-OF-POCKET COSTS AFFORDABLE 	2.6 OUT OF 10 POINTS NV has limited protections against short-term, limited-duration health plans and partial surprise medical bill protections.	3.5 OUT OF 10 POINTS NV ranked poorly in terms of affordability burdens—15% of adults could not get needed medical care due to cost. The share of people with other affordability burdens is far higher.	NV should consider a suite of measures to ease consumer burdens, such as: stronger protections against STLD health plans; SMB protections not addressed by the federal No Surprises Act; waiving or reducing cost-sharing for high-value services; and requiring standard plan design on their state exchange.

APCD = All-Payer Claims Database CHES = Consumer Healthcare Experience State Survey CMS = Centers for Medicare and Medicaid Services EHR = Electronic Health Records FPL = Federal Poverty Level PCE = Personal Consumption Expenditure (Healthcare PCE measures spending growth among households as well as nonprofit, commercial and government hospitals/nursing homes) SHADAC = State Health Access Data Assistance Center SMB = Surprise Medical Bill STLD = Short-Term, Limited-Duration

NEVADA NOTES

Methodological Notes:

State rank reflects the weighted sum of the policy and outcome scoring components. A lower state rank number (i.e. close to 1) reflects a higher overall score and better performance when compared to other states. For a complete discussion of methodology, please see healthcarevaluehub.org/affordability-scorecard/methodology.

Curb Excess Prices in the System:

In order to receive credit for price transparency tools, a state's tool had to be public-facing, searchable by specific procedure and hospital and show the negotiated rate paid by insurance plans/patients (not chargemaster rate). Nevada did not have a tool that met this criteria.

NV has none of the four policy elements measured for this category. NV's Patient Protection Commission is working to develop a healthcare cost growth benchmark with support from the Peterson-Milibank Program for Sustainable Health Care Costs. NV also passed legislation to establish an APCD in 2021.

Reduce Low-Value Care:

According to the Johns Hopkins Overuse Index created using Medicare data, NV's overuse of low-value care is 1.3 standard deviations above the national average, which is undesirable.

Nevada mandates CLABSI reporting alone with no other requirements.

Improper use of antibiotics is another type of low-value care. Antibiotic stewardship is the effort to measure and improve how antibiotics are prescribed by clinicians and used by patients—states were scored on what share of their hospitals follow the CDC's stewardship program.

Extend Coverage to All Residents:

NV's legislature passed a Medicaid buy-in program in 2017 that was vetoed by the governor. In 2021, NV passed a law that paves the way to develop a public option by creating a state-managed health insurance plan by 2026.

NV offers Medicaid coverage to lawfully residing immigrant children without a 5-year wait. NV does not offer coverage options for legally residing immigrant pregnant people or undocumented children/pregnant people/adults.

NV has effective rate review as classified by CMS but does not incorporate affordability criteria into rate review.

Make Out-of-Pocket Costs Affordable:

High-deductible health plans create barriers to care for many families. According to SHADAC, the average family deductible among employer insurance plans in NV rose 18% between 2013 and 2019, totaling \$3,100 in 2019. States should consider exploring new policies to reduce financial barriers to care for people with high-deductible health plans, although there are limits to how much states can influence employer insurance and Medicare.

In response to rising insurance costs, some people turn to STLD health plans, which offer lower monthly premiums compared to ACA-compliant plans. However, these policies offer less coverage, can discriminate against people with pre-existing conditions and pose significant financial risks for consumers. States received credit depending on how much they limit or protect against these plans.

NV has partial protections against SMB. 'Comprehensive' SMB protections include emergency departments and hospitals, apply to all insurance types, hold consumers harmless/prevent balance billing and adopt adequate payment standard or dispute resolution process. States with only some of these policies have 'partial' protections. The federal No Surprises Act prohibits surprise medical billing in most plans effective January 2022. However, it does not cover ground ambulances which often result in surprise bills. States can still implement protections in this area—60% of ground ambulance rides in NV charged to commercial insurance plans had the potential for surprise medical billing.*
